

# What are Low Voltage Products about?

## It is:

- keeping the electricity flowing in the data center so your son can check Facebook 24/7 (sorry)
- supporting electrical installers with the best fitting instructions and training
- providing distributors with the broadest range of electrical products and service support
- providing the best engineering software for a Systems Integrator
- protecting your Granny when her cup of tea spills on the television
- controlling the flow of electricity in your Uncle's small manufacturing line
- reducing your electricity bill through smart building automation in your apartment building
- protecting your prized sound system when lightning strikes
- putting the lights on when you put the key card in the hotel room wall
- it's providing every single switchgear and motor control center for a global leader in the oil business

It's power and productivity for a better world

ABB Low Voltage Products division supports a range of customers, connecting, protecting and automating critical business processes – including power and energy distribution – to improve the reliability & efficiency of their activities.
